

Help shape the future of natural resource management

IN THE MACKAY WHITSUNDAY ISAAC REGION

Reef Catchments is developing a new regional Natural Resource Management Plan and invites local knowledge, experience and priorities to help shape it.

Why it matters

The new NRM Plan will set a shared regional vision and guide practical action, investment and collaboration to care for the region's natural assets.

What the plan will do

- **Guide regional priorities:** Identify shared goals for healthy waterways, biodiversity, sustainable agriculture, climate resilience and community stewardship.
- **Bring knowledge together:** Combine science, regional data, Traditional Owner knowledge, landholder experience and stakeholder input.
- **Support investment:** Provide a trusted evidence base to guide projects, partnerships and funding decisions.
- **Strengthen collaboration:** Align effort across communities, Traditional Owners, industry, government and delivery partners.
- **Stay practical and adaptable:** Respond to changing environmental, social and economic conditions while keeping a long-term focus.

How you can contribute

Your input will help ensure the plan reflects local values, priorities and opportunities. Reef Catchments will seek feedback through workshops, meetings and public consultation on the draft plan.

Planning and initial engagement: **Now**

Draft plan review: **Mid 2027**

Final plan expected: **End 2027**
